

Sewer Connection Presale for the Henderson Catchment Area

Protecting our environment and quality of life for St. Clements Citizens

On your property

For most homeowners, the sewer system will connect to existing septic systems. The main change to the homeowner's system will involve installing a pump in the septic or holding tank, and running a service pipe to the sewer connection valve at the property line.

If you have a two-cell/dual-compartment septic tank in good condition and shown to be water-tight, it will be compatible with the new sewer system. If you have an older tank, you may be required to have a new septic tank installed. Holding tanks in good condition can often be converted into a compatible two-cell tank.

If you currently have a septic field, it will be disconnected from your septic tank and left as is. The liquid that was being discharged to your septic field will now be pumped to the East Selkirk Lagoon.

St. Clements The place to be

Contractors

As you prepare to hook up to the new sewer system, your contractor will be an extremely helpful source of information. Your qualified contractor can help you determine the work required and costs for that work, as well as making sure all requirements including inspections are met.

It is important that the contractor you hire has the right training and experience for the work so that they can ensure your side of the property is prepared to connect properly for a seamless transition to hooking up to the sewer system.

We cannot recommend a specific contractor but below is a list of contractors licensed by the City of Winnipeg that are qualified to do the works in the RM. Or as otherwise approved by the RM of St. Clements.

Company	Mailing address	City/Town	Postal Code	Office contact	Phone no.	Email
